

ENVIROMIST

VEGEDOME

COVERED SPRAYER

Following extensive development and testing, Enviromist have introduced to the horticultural market a purpose-designed sprayer that's ideal for row crop situations.

This new and radical sprayer features:

- A vertical plane spray pattern
- Complete flexibility using singular head configuration in multiples, to suit individual requirements

Advanced CDA Technology makes every drop count.

The Vegedome features Micron Controlled Droplet Application (CDA) spinning disc rotary atomiser to produce optimum sized spray droplets for maximum spraying efficiency.

Flow control at your fingertips.

Enviromist's control system allows for flow monitoring of each individual spray head as well as a light indicator to monitor the working of the spray head motor.

Controlled Droplet Application (CDA) chemical spraying is widely used throughout the world, particularly in the horticultural and viticulture industries where chemical contamination of the soil and fruit has been a critical issue. The turf industry has always grappled with the problems of high volume boom sprayers which can result in massive loss of chemicals through wind drift and wash into the soil, plus an equally high waste of water. CDA technology uses low pressure, low volume application producing a uniform fine droplet pattern which goes directly to the foliage and quickly dries. Coupling CDA heads into Enviromist's patented Vegedome almost totally cuts out spray drift - even in windy conditions.

- **Simple and easy to use.**
- **Improves chemical efficiency.**
- **Protects plants from spray drift.**
- **Can be tractor or quad mounted.**
- **Adjustable spray width - 25 to 90cm**
